Software Development Engineer, Retail and Retail Operations Expansion Team (Level 4)

DESCRIPTION

Job summary
At Amazon, we're working to be the most customer-centric company on earth. To get there, we need exceptionally talented, bright, and driven people. If you'd like to help us build the place to find and buy anything online, this is your chance to make history.

We are looking for Software Development Engineers to be based in Amman, Jordan working on some of the key initiatives planned to support our rapid evolution and growth of Amazon International Expansion Business, and in the process solve some of the most challenging problems.

Key Responsibilities:

- Design, implement, test, deploy and maintain innovative software solutions to transform service performance, durability, cost, and security
- Use software engineering best practices to ensure a high standard of quality for all of the team deliverables
- Write high quality distributed system software
- Work in an agile, startup-like development environment, where you are always working on the most important stuff

BASIC QUALIFICATIONS

- Bachelor's Degree or Masters in Computer Science or related field
- Agile development, daily scrum, taking ownership of both production issues and new features
- Solid technical understanding and API documentation are essential for cross-team development
- Computer Science fundamentals in data structures
- Computer Science fundamentals in algorithm design, problem solving, and complexity analysis
- Good English written / verbal communication skills, bilingual preferred
- Self-motivated, thrives working in a small team

- Focused and professional attitude
- Ability to maintain a high level of confidentiality.

PREFERRED QUALIFICATIONS

- 2+ years of programming experience with progressive development responsibilities in Java
- Java ecosystem for daily development: Spring/Spring Boot, Apache,Ant/Maven/Gradle, Tomcat/Jetty/TomEE, Jenkins.
- RESTful API specification, implementation, JSON and solid documentation will be a plus (or SOAP webservice experience with leanings towards REST)
- AWS services such as EC2, S3, SQS, and Kinesis

Software Development Engineer (Level 5)

Job ID: 1910545 | Nuqtat Al Taknalojia

DESCRIPTION

Job summary
At Amazon, we're working to be the most customer-centric company on earth. To get there, we need exceptionally talented, bright, and driven people. If you'd like to help us build the place to find and buy anything online, this is your chance to make history.

We are looking for Software Development Engineers to be based in Amman, Jordan with 1+ years of solid Software engineering experience involving solving complex problems, to work on some of the key initiatives planned to support our rapid evolution and growth of Amazon International Expansion Business, and in the process solve some of the most challenging problems. Amazon is an equal opportunity employer.

Key Responsibilities:

- 1+ years industry experience in designing software architecture, and operating scalable software systems
- Requirement analysis, failure analysis, API design, distributed consistency
- Distributed caching (memcached, Redis, or comparable technology)
- Metrics, analysis, and software profiling
- Strong object-oriented design skills with understanding of common design paradigms
- Experience with Java or other object oriented languages- preferably on a UNIX or Linux platform including JVM internals or equivalent lower-level implementation
- Experience with distributed (multi-tiered) systems, algorithms, and relational databases

- Experience writing unit and system level tests using dependency injection frameworks and object mocking
- Experience in optimization mathematics (linear programming, nonlinear optimization)
- Oral and written communication skills (ability to produce runbooks, technical, and non-technical documentation)
- Experience coaching junior software development engineers including code review and design review
- Bachelor's degree in computer science, computer engineering or related technical discipline

BASIC QUALIFICATIONS

- 3+ years industry experience in designing software architecture, and operating scalable software systems
- Requirement analysis, failure analysis, API design, distributed consistency
- Distributed caching (memcached, Redis, or comparable technology)
- Metrics, analysis, and software profiling
- Strong object-oriented design skills with understanding of common design paradigms
- Experience with Java or other object oriented languages- preferably on a UNIX or Linux platform including JVM internals or equivalent lower-level implementation
- Experience with distributed (multi-tiered) systems, algorithms, and relational databases
- Experience writing unit and system level tests using dependency injection frameworks and object mocking
- Experience in optimization mathematics (linear programming, nonlinear optimization)
- Oral and written communication skills (ability to produce runbooks, technical, and non-technical documentation)
- Experience coaching junior software development engineers including code review and design review
- Bachelor's degree in computer science, computer engineering or related technical discipline

PREFERRED QUALIFICATIONS

- Strong, object-oriented design and coding skills (C/C++ and/or Java preferably on a UNIX or Linux platform)
- Ability to effectively articulate and drive solutions to technical and business challenges
- Deal well with ambiguous/undefined problems; ability to think abstractly
- Experience working with driving product vision to deliver long term customer and advertiser value
- Willingness to own all stages of development process: requirements, design, implementation, testing, and operational support
- Excellent interpersonal communication with strong verbal / written English skills

Software Development Engineer III (Level 6) (Level 6)

Job ID: 2028032 | Nuqtat Al Taknalojia

DESCRIPTION

Job summary
MENA Tech focuses on building innovative solutions for expanding Amazon business in UAE, Saudi Arabia, and Egypt. We are looking for a passionate, hard-working, and talented Senior Software Development Engineer who can build innovative and mission critical system software applications, and tools. You will have an enormous opportunity to make a large impact on the design, architecture, and development of consumer products. You will be responsible for delivery and support of large-scale, multi-tiered, distributed software applications and tools.

Responsibilities:

- Ability to design and code right solutions starting with broadly defined problems
- Drive best practices and engineering excellence
- Work with other team members to develop the architecture and design of new and current systems
- Work in an agile environment to deliver high quality software
- As a senior engineer, you will be expected to mentor others on the team and raise the bar on high level design. You will be expected to convert business goals into tech solutions

BASIC QUALIFICATIONS

- Strong system design and software architecture skills
- Strong, object-oriented design and coding skills (C/C++ and/or Java preferably on a UNIX or Linux platform)
- Knowledge of Perl or other scripting languages a plus
- Experience with distributed (multi-tiered) systems, algorithms, and relational databases
- Experience in optimization mathematics (linear programming, nonlinear optimization)
- Ability to effectively articulate technical challenges and solutions
- Deal well with ambiguous/undefined problems; ability to think abstractly
- Experience with Spring MVC
- Proficiency with HTTP Protocol, REST, XML, J2EE, JavaScript, and AJAX

PREFERRED QUALIFICATIONS

- Experience with AI or Machine Learning

- Past experience working in a large organization where you drove high-level design and architectural decisions
- Experience developing on Unix/Linux

Software Development Manager (Level 6)

Job ID: 1622348 | Nuqtat Al Taknalojia

DESCRIPTION

Job summary
At Amazon, we're working to be the most customer-centric company on earth. To get there, we need exceptionally talented, bright, and driven people. If you'd like to help us build the place to find and buy anything online, this is your chance to make history.

We are looking for Software Development Managers to be based in Amman, Jordan with 7+ years of solid Software engineering experience involving solving complex problems, to work on some of the key initiatives planned to support our rapid evolution and growth of Amazon International Expansion Business.

Primary Responsibilities:
We are looking for a seasoned software development manager to lead and drive the team's technical direction, strategizing and shaping our long-term vision and architecture:

- You will own major deliverables end-to-end, drive roadmaps, and provide technical leadership to the engineering team
-
- You'll be responsible for the overall development life cycle of the solution and manage complex projects with significant bottom line impact
-
- Work with product managers in developing a strategy and road map to provide compelling capabilities for the vendors community that helps them succeed in their business goals
-
- Work closely with senior engineers to develop the best technical design and approach for new product development
-
- Instill best practices for software development and documentation, assure designs meet requirements, and deliver high-quality work on tight schedules
-

- Project management - prioritization, planning of projects and features, Stakeholder management and tracking of external commitments
-
- Operational Excellence - monitoring & operation of production services
-
- Demonstrated capability to provide depth and breadth technical leadership to agile teams

BASIC QUALIFICATIONS

- Bachelor's Degree in Computer Science or related field
- 7+ years of experience as a software developer
- 5+ years of software development manager experience
- Excellent problem solving abilities and object-oriented design skills
- Fluency and experience in object-oriented programming languages, like Java
- A thorough understanding of software development in a team and a strong track record of shipping software
- Strong problem-solving and data analysis skills
- Excellent verbal and written communication skills with the ability to present complex technical information clearly and concisely to a variety of audiences
- The ability to handle multiple competing priorities
- Experience developing and executing a software roadmap
- Experience managing front-end, back-end, and services-oriented software systems

PREFERRED QUALIFICATIONS

- Graduate degree (Master's or PhD) in Computer Science or related field
- 10+ years' professional experience in software development
- Experience building and operating mission critical, highly scalable distributed softwares and systems
- Prior knowledge of vendors management, Software arabization and RTL
- Demonstrated capability to provide depth and breadth technical leadership to agile teams
- Solid understanding of Machine Learning

Amazon is an equal opportunity employer.
