

## **About the Coding Academy by Orange**

Orange Jordan Coding Academy, is one of the leading Orange Jordan CSR programs, it was launched in June 2019 in partnership with Simplon. co and PSUT to equip youth with the necessary skills that will qualify them as the next generation of programmers. We found a program to cover the local market's needs for full-stack programmers and break the youth's unemployment chain.

Each season, we receive thousands of applications. Still, only the best 50 applicants between the ages of 18 and 30 get the chance to win a fully-funded, intensive six-month training course in programming.

Our students will learn HTML, CSS, Javascript, and PHP technologies, in addition to 100 hours on many soft and employment skills. Our program has proven efficient because of the self-learning approach that professional trainers oversee. After the six-month training program, they have to complete a one-month internship/e-internship at a local company.

Our headquarter are at the Orange Digital Village in Abdali – Amman, and to cover all areas in Jordan we expand to include more governates such as Irbid and Aqaba.

## **Be part of our success story**

As we are approaching the end of the current running semester, we are looking for a reputable corporate willing to contribute to our students' professional learning opportunities by offering them a job opportunity in the programming field.

Our students are familiar with Frontend, Backend, or full-stack Developer, so if there is a chance to collaborate with Orange Jordan Coding Academy by providing an employment opportunity or training for our graduates, we would like to cooperate with you and provide you with highly-committed and well-trained qualifications.

At the Coding Academy, we aim to support young people and women across the kingdom and facilitate the process of their training and employment. We welcome the idea of training or direct employment, remote or hybrid, or inside offices; if this is available in your company.

We graduated many cohorts with excellent results, and it will be our honor to provide you with the results for each cohort.

## **Our Belief:**

We at Orange Jordan believe in the power of collaboration between private sectors. We can together give youth a chance for a better life by giving them a hand.

## **MODEL:**

We want to draw your attention that the Ministry of Digital Economy and Entrepreneurship has launched its Youth, Technology, and Jobs (YTJ) project that aims to improve digital opportunities and expand digitized government services which are addressed to youth and young people in Jordan. Through this project, the ministry will encourage companies to recruit more youth in the digital sector through an incentive program that will offer employers salary shares. Also, another program called incentive temporary job opportunities in the digital and entrepreneurial sector can be an added value for job seekers.

**Let's meet:**

We would appreciate the opportunity to have a meeting and tell you more about our success stories and the impact that we can together bring to youth. So, if you are interested, please let me know to arrange a meeting soon.

Looking forward to hearing from you
